PREVENTATIVE MAINTENACE CHECKLIST - LATHE

CUSTOMER:

MACHINE MAKE:

MACHINE MODEL:

SERIAL NUMBER:

DATE:

OP	DESCRIPTION		COMMENTS / NOTES
GENERAL			
1	Check machine level, Requires levelling plate (By request only prior to visit)		
2	Check and adjust X,Z-Axis Backlash		
3	Check Spindle Drive belt for wear and deterioration & Tension		
4	Check X Axis Brake for operation		
5	Check Z Axis drive belts for tention and deterioration		
6	Check gear exchange operation		
7	Check for any oil, air coolant leaks		
8	Check for bearing noise X, Z Axis Check for bearing noise spindle Check for bearing noise gearbox		
9	Check Z Axis slideway guards and wipers		
10	Check X and Z slideway wipers for wear		
11	Check Turret alignment X and Z Axis		
12	Check Turret centerline, adjust if necessary (X Axis stroke)		
13	Check flexible tracking for wear and deterioration		
14	TAILSTOCK (if fitted) Check condition of revolving centre		
15	PARTS CATCHER (if fitted) Check for correct operation and damage		
16	MANUAL TOOLSETTER (if fitted) Check for damage and recalibrate (customer to supply soft metal billet for recalibration.)		
17	ROTARY TOOL (if fitted) Check Rotary Tool drive on turret		
18	ROTARY TOOL (if fitted) Check drive belts for tension and deterioration		

ELECTRICAL			
1	Check main supply voltage		
2	Check for tightness of magnetic switches, relays, thermal relays, fuses, circuit breakers, servo connectors, terminal, etc.		
3	Check work lamp and indicator lamps		
4	Check push button and switches		
5	Check function of each emergency stop		

Changed Fanuc control battery

Check & clean electrical motor fans	

	Check function of door locks and interlocks		
	Check and adjust spindle load monitor		
	Check for dirt, oil in electrical control cabinets and advise how to clean if required		
	Clean electrical cabinet filters and fans		
)	Check external cables for damage		

LUBRICATION

1	Clean auto lube tank and port filter, Change oil, clean/replace suction filter.		
2	Check Lubrication pump pressure		
3	Check for oil appearing on slideways and ballscrews		

HYDRAULICS

1	Clean Hydraulic tank and filter. Change oil		
2	Check Tailstock pressure, chucking pressure and main pressure gauges for correct operation and damage		
3	Check Chuck clamp/unclamp working correctly		
4	SPINDLE OIL COOLER Clean tank and filter, change oil and check air filters		

PNEUMATICS

1	Clean air/oil units and clean/replace filters		
2	Check air gauges and pressure adjust if necessary		

BACK UP

1	Make Machine Back up		

THERMAL CHECK

1	Picture Machine when running Electrical Panel and Motors		
	ENGINEER (SIGNATURE)		CUSTOMER (SIGNATURE)
